

BHABESH BEHERA

LLM PIPELINES · AI AGENTS · SECURITY RESEARCHER

✉ bhabeshcse@gmail.com | 🌐 portfolio.bhuvism.in | 🐙 github.com/Bhuvilol | 🔗 LinkedIn | 🐦 @0xbhuvi

SUMMARY

AI-native CS undergraduate who ships fast. Experienced building **LLM-powered pipelines, AI agent demos, sales and CS automation tools, and real-time data systems**. Comfortable working directly with customers, translating technical questions into working prototypes, and iterating quickly in ambiguous, zero-to-one environments. Strong track record of taking projects from idea to demo under pressure. Familiar with the frontier of AI tooling, agentic workflows, and B2B SaaS.

SKILLS

AI / ML: LLM Pipelines, AI Agent Design, Prompt Engineering & Function Calling, RAG, Agentic Workflows, AI Automation

Languages: Python, JavaScript, Java

Frameworks & Libraries: LangChain, OpenAI API, Anthropic API, TensorFlow, PyTorch, Streamlit, OpenCV

Backend & Data: Node.js, Express.js, REST APIs, PostgreSQL, Prisma, Real-time Event Processing, Socket.IO

Tools & Infra: Git, GitHub, Docker, Docker Compose, Postman, Firebase, Web Scraping, Data Pipelines

RESEARCH & ENGINEERING PROJECTS

AI Sales & CS Automation Agent | *Python, LLM APIs, Streamlit*

2025

- Built an **end-to-end LLM-powered agent pipeline** that processes **10K+ customer transcripts**, automates intent classification, and surfaces actionable insights – directly applicable to Crustdata's internal sales and CS automation goals.
- Engineered **15+ behavioral signal features** with causal scoring as custom eval metrics, improving lead quality detection by **35%**; packaged findings in reports consumable by non-technical stakeholders.
- Built a modular **Streamlit demo platform** with counterfactual reasoning and interactive filters – designed for rapid iteration and customer-facing demo readiness.

Vortex – Real-Time Multi-Role Event & Scoring Platform | *React, Express, PostgreSQL, Prisma, Docker, Socket.IO*

2026

- Architected a **full-stack platform with distinct admin, jury, and participant roles**, live leaderboard sync via Socket.IO, and isolated evaluation workflows – mirrors the kind of internal tooling and customer-facing dashboards Crustdata ships.
- Designed scalable REST APIs and Prisma schemas supporting **high-throughput concurrent scoring**; containerized with Docker Compose for **one-command reproducible deploys**, cutting setup time by **70%**.
- Sole architect and developer – **scoped, built, and shipped end-to-end** under a live event deadline, demonstrating ownership and velocity in a high-stakes environment.

LicenZ – AI Data Provenance & Verification Platform | *Ethereum, IPFS, Web3, Python*

2025

- Built a **blockchain-backed data authenticity system** for 100+ AI assets, automating verification of **500+ content hashes** and reducing manual validation effort by **60%** – scalable data quality pipeline directly applicable to B2B data infrastructure.
- Optimized decentralized IPFS data retrieval by **40%**, demonstrating ability to improve real-time data pipeline throughput at scale – relevant to Crustdata's core API performance goals.

SAFE101 – Real-Time AI Detection & Alerting System | *YOLO, CNN, OpenCV, Python*

2025

- Built a real-time simulation environment processing **30+ FPS** with YOLO object detection at **92% accuracy** – demonstrates ability to build and ship high-throughput, event-driven data pipelines quickly.
- Designed **modular, independently testable components** (sensor fusion, detection, alerting), enabling fast experimentation – the same builder mindset applied to demos and prototypes at Crustdata.

EXPERIENCE

Winner – UIDAI Data Hackathon

2025

AI-Powered Governance & Data Analysis

India · 200+ Participants

- Built and **demo'd a production-ready AI solution** for large-scale governance data analysis under competitive, time-constrained conditions – exactly the build-fast, ship-clean mentality Crustdata values.
- Designed automated quality checks to validate AI-generated outputs at scale; **presented to judges and stakeholders**, demonstrating customer-facing communication skills alongside technical execution.

TrustSeal – Supply Chain Tracking System

2026

PROXIMA 2026 Industry Showcase

1000+ Attendees

- Built and publicly demoed a **tamper-evident, IoT + blockchain asset tracking product** in front of 1000+ industry attendees – full ownership from research and engineering to live customer-facing presentation.
- Engineered audit-style logging with IPFS and Polygon for **end-to-end data traceability**, directly applicable to provenance and fidelity requirements in B2B AI data pipelines.

Runners-Up – SOA Ideathon 2025

2025

Scalable Platform Design

India

- Designed and pitched a scalable Web3 supply chain platform under pressure, demonstrating **rapid prototyping, first-principles problem solving, and ability to communicate technical ideas to non-technical audiences.**

LEADERSHIP & COMMUNITY

Developer Student Clubs · ODISHA DAO · Cloud Community Bhubaneswar

2023 – Present

Technical Lead & Community Organizer

Bhubaneswar, India

- Organized AI/ML and Web3 technical events impacting **1500+ students**; led workshops on LLMs, agentic AI, and developer tooling – builds the kind of technical content & demos Crustdata uses for growth and distribution.
- Active open-source contributor with **25+ GitHub pull requests**; strong async written communication and collaborative practices across distributed teams.

EDUCATION

Institute of Technical Education and Research (ITER), SOA University

2023 – 2027

B.Tech in Computer Science and Engineering (Cybersecurity)

CGPA: 9.1 / 10

Nalanda Vidya Mandir

2019 – 2021

Senior Secondary Education

82%
